

To Whom It May Concern,

I am pleased to recommend Dipson Bir Kunwar, who served as an AI Systems Integrator in the Computer Science department at Sports Media Inc. During his 13-week internship, Dipson consistently demonstrated strong technical capability, professionalism, and reliability across all assigned workstreams.

Dipson contributed meaningfully to both full-stack engineering and applied machine learning. He played a key role in strengthening the backend infrastructure of our Nonprofit Partnership Platform, resolving issues that had been blocking database connectivity and conducting a proactive security review that identified a SQL injection vulnerability. His initiative in documenting additional security findings showed maturity beyond typical intern expectations.

In parallel, Dipson developed two LoRA adapters and a dual-mode Stable Diffusion image generator, publishing his models to Hugging Face and building a functional Gradio interface. His work reflected not only technical execution but genuine curiosity and understanding of underlying systems.

Throughout his term, Dipson maintained excellent communication habits, submitting clear weekly synopsis reports and ensuring the team was consistently informed of his progress. His performance ratings across all competencies were outstanding, and he was highly recommended for future engagement by his team lead.

Dipson would be an asset to any organization seeking a thoughtful, disciplined, and technically capable contributor. I fully endorse his continued professional growth and future opportunities.

Sincerely,

Dan Kost
